

**MOUNTAIN STONE**  
THE MARK OF EXCEPTIONAL VALUE

## PRODUCT "CURING" PROCESS

Veneerstone ships freshly made manufactured stone. This fresh made stone will typically achieve 90% of its true color after approximately 30 days of manufacturing (based on good weather conditions). An expected chemical reaction allows for a proper "curing" of the color.

Should a shipment of stone be received and the color of the stone appears darker than anticipated (SUCH AS GREY INSTEAD OF WHITE) please be aware that the stone could be experiencing the curing process and may lighten over the next few weeks.

**NOTE:** Product can be installed in its "un-cured" state. Installation does not affect the process. Product curing will happen naturally on-site. However, if customer is unsure they are satisfied with color of stone and are considering returning, we do not recommend installing. Once installed, product cannot be returned.

## CURING PROCESS—OVEN TEST

If you are still concerned that the proper color will not be achieved, there is an "oven test" that will demonstrate a brief (non-permanent) display of how the stone will lighten.

**1**

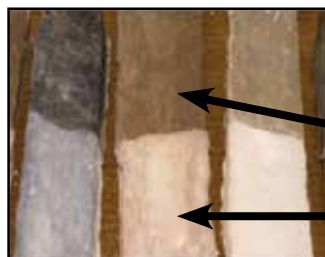

Cut piece of stone in half.  
One for an original, one for test.

**2**

Place the test half pieces in oven @ 350°F  
for 10-15 minutes (do this 3-4 times leaving  
15 minutes to cool in between treatment).

**3**

Place baked stone next to master to view  
difference.

ORIGINAL STONE

"OVEN" CURED STONE

For more information, please visit our website at [mtstone.com](http://mtstone.com).

**NOTE:** Once the "oven-baked" stone cools, it will return to its former "un-cured" color. Complete curing process must happen naturally.
